

Reasoning and Problem Solving

Step 6: Partitioning

National Curriculum Objectives:

Mathematics Year 4: (4N4a) [Identify, represent and estimate numbers using different representations](#)

Mathematics Year 4: (4N6) [Solve number and practical problems that involve 4N1 - 4N5 and with increasingly large positive numbers](#)

Differentiation:

Questions 1, 4 and 7 (Problem Solving)

Developing Find two different ways to partition a 4-digit number. Includes pictorial representations. Each number is partitioned once. Some unconventional partitioning.

Expected Find two different ways to partition a 4-digit number. Using some instances of multiple examples of unconventional partitioning within a number.

Greater Depth Find two different ways to partition a 4-digit number. Includes some pictorial representations. Multiple examples of unconventional partitioning within a number where the parts are not given in place value order.

Questions 2, 5 and 8 (Reasoning)

Developing Explain which statement partitions a 4-digit number correctly. Includes pictorial representations. Each number is partitioned once. Some unconventional partitioning.

Expected Explain which statement partitions a 4-digit number correctly. Using some instances of multiple examples of unconventional partitioning within a number.

Greater Depth Explain which statement partitions a 4-digit number correctly. Includes written representations with multiple examples of unconventional partitioning within a number, where the parts are not given in place value order.

Questions 3, 6 and 9 (Reasoning)

Developing Explain which partitioned representation does not show a given 4-digit number. Includes a variety of pictorial representations where each number has been partitioned once. Some use of unconventional partitioning.

Expected Explain which partitioned representation does not show a given 4-digit number. Includes pictorial and written representations. Using some instances of multiple examples of unconventional partitioning within a number.

Greater Depth Explain which partitioned representation does not show a given 4-digit number. Pictorial and written representations used. Multiple examples of unconventional partitioning within a number where parts are not given in place value order.

Partitioning

1a. Sam says,

This is the only way to partition 3,185.

Prove Sam wrong by finding one more different way to partition 3,185.

PS

Partitioning

1b. Frances says,

This is the only way to partition 5,916.

Prove Frances wrong by finding one more different way to partition 5,916.

PS

2a. These children are making the number 8,245.

I used 8 thousands, 2 hundreds, 3 tens and 15 ones.

Gracie

I have used 7 thousands, 11 hundreds, 9 tens and 45 ones.

Wasim

Who has partitioned the number correctly? Explain why.

R

2b. These children are making the number 3,265.

I used 2 thousands, 12 hundreds and 65 ones.

Tommy

I have used 3 thousands, 2 hundreds, 4 tens and 25 ones.

Misha

Who has partitioned the number correctly? Explain why.

R

3a. Which representation does *not* show 3,123? Explain why.

A.	
B.	3 thousands, 11 tens and 13 ones
C.	

R

3b. Which representation does *not* show 6,151? Explain why.

A.	6 thousands, 15 tens and 1 one
B.	
C.	

R

Partitioning

4a. Blake says,

These are the only two ways to partition 2,923.

$$2,000 + 900 + 20 + 3$$

$$1,000 + 1,900 + 10 + 13$$

Prove Blake wrong by finding two more different ways to partition the number.

PS

Partitioning

4b. Natasha says,

These are the only two ways to partition 6,029.

$$6,000 + 0 + 20 + 9$$

$$5,000 + 1,000 + 20 + 9$$

Prove Natasha wrong by finding two more different ways to partition the number.

PS

5a. These children are making the number 2,921.

Alex

I used 2 thousands and 92 tens.

I used 1 thousand, 19 hundreds, 2 tens and 1 one.

Vishal

Who has partitioned the number correctly? Explain why.

R

5b. These children are making the number 5,071.

I used 5 thousands, 7 hundreds and 1 ten.

Ashley

I used 4 thousands, 10 hundreds and 71 ones.

Zahra

Who has partitioned the number correctly? Explain why.

R

6a. Which representation does *not* show 2,132? Explain why.

A.	
B.	two thousands, 13 tens and two ones
C.	

R

6b. Which representation does *not* show 3,056? Explain why.

A.	30 thousands, 5 tens and 6 ones
B.	
C.	

R

Partitioning

7a. Adam says,

There are only two ways to partition 7,201.

Prove Adam wrong by finding at least three different ways to partition 7,201. Record them below.

PS

Partitioning

7b. Hallie says,

There are only two ways to partition 4,598.

Prove Hallie wrong by finding at least three different ways to partition 4,598. Record them below.

PS

8a. These children are making the number 6,805.

Rory

I have used 38 hundreds, 68 tens, 28 ones and 2 thousands.

I used 130 tens, 105 ones, 3 thousands and 24 hundreds.

Emily

Who has partitioned the number correctly? Explain why.

R

8b. These children are making the number 9,673.

Boris

I have used 183 ones, 4 thousands, 53 hundreds and 19 tens.

Tiffany

I used 21 tens, 25 hundreds, 53 ones and 7 thousands.

Who has partitioned the number correctly? Explain why.

R

9a. Which representation does *not* show 4,920? Explain why.

A.	
B.	12 hundreds, 10 ones, 3 thousands and 71 tens
C.	

R

9b. Which representation does *not* show 4,061? Explain why.

A.	3 tens, 4 thousands and 31 ones
B.	
C.	

R

Reasoning and Problem Solving Partitioning

Developing

- 1a. Various answers, for example:
3 thousands + 1 hundred + 8 tens + 5 ones;
3 thousands + 1 hundred + 5 tens + 35 ones;
2 thousands + 11 hundreds + 85 ones.
- 2a. Grace is correct because $8\text{ thousands} + 200 + 30 + 15 = 8,245$. Wasim has made 8,235.
- 3a. A is incorrect because it shows 2,123.

Expected

- 4a. Various answers, for example:
2 thousands + 9 hundreds + 1 ten + 13 ones;
2 thousands + 91 tens + 3 ones;
1 thousand + 1 thousand + 9 hundreds + 1 ten + 13 ones.
- 5a. Vishal is correct because $1\text{ thousand} + 19\text{ hundreds} + 2\text{ tens} + 1\text{ one} = 2,921$. Alex has made 2,920.
- 6a. C is incorrect because it shows 2,129.

Greater Depth

- 7a. Various answers, for example:
7 thousands + 2 hundreds + 1 one;
6 thousands + 11 hundreds + 10 tens + 1 one;
6 thousands + 12 hundreds + 1 one;
5 thousands + 21 hundreds + 8 tens + 21 ones and
4 thousands + 31 hundreds + 6 tens + 41 ones.
- 8a. Emily is correct because $3\text{ thousands} + 24\text{ hundreds} + 130\text{ tens} + 105\text{ ones} = 6,805$. Rory has made 6,508.
- 9a. A is incorrect because it shows 4,908.

Reasoning and Problem Solving Partitioning

Developing

- 1b. Various answers, for example:
4 thousands, 17 hundreds, 18 tens + 36 ones;
3 thousands + 20 hundreds + 90 tens + 16 ones;
5 thousands + 8 hundreds + 11 tens + 6 ones.
- 2b. Tommy and Misha are both correct. Tommy is correct because $2\text{ thousands} + 12\text{ hundreds} + 65\text{ ones} = 3,265$. Misha is also correct because $3\text{ thousands} + 2\text{ hundreds} + 4\text{ tens} + 25\text{ ones} = 3,265$.
- 3b. B is incorrect because it shows 6,111.

Expected

- 4b. Various answers, for example:
4 thousands + 20 hundreds + 2 tens and 9 ones;
3 thousands + 30 hundreds + 2 tens + 9 ones;
4 thousands + 202 tens + 9 ones.
- 5b. Zarah is correct because $4\text{ thousands} + 10\text{ hundreds} + 71\text{ ones} = 5,071$. Ashley has made 5,710.
- 6b. A is incorrect because it shows 30,056.

Greater Depth

- 7b. Various answers, for example:
4 thousands + 5 hundreds + 9 tens + 8 ones;
3 thousands + 15 hundreds + 8 tens + 18 ones;
3 thousands + 13 hundreds + 27 tens + 28 ones;
2 thousands + 22 hundreds + 33 tens + 68 ones.
- 8b. Boris is correct because $4\text{ thousands} + 53\text{ hundreds} + 19\text{ tens} + 83\text{ ones} = 9,673$. Tiffany has made 9,763.
- 9b. B is incorrect because it shows 4,062.
