

Maths – Tenths, Hundredths and Decimals

Each day there is a section of the PowerPoint which relates to that days learning. Go through the relevant slides each day.

After, complete the activity pack for that day. The questions will link to what you have seen in the PowerPoint.

Remember, this is consolidating your learning from previous units in the year.

There are also 4 extension activities for the week available if you finish and want something extra.

Make sure you spend some time practising your times tables (in and out of order) as well as any targets you want to work on.

There will also be some mathematics work for you to complete and you can always explore activities on BusyThings.

It might be helpful to refer to our target sheets here:
