

Science guidance

This week in science we are going to recap soluble and insoluble materials.

Follow the pdf document I have attached. It has a sequence of grids to fill in and instructions to follow to ensure a safe and fun experiment. You can print these out or use them on the computer, or you can draw them out on a piece of paper.

You absolutely do not have to use the food/materials I suggested - feel free to explore more of them or fewer.

To extend yourself, you may experiment with different variables (such as using milk or juice to dissolve materials in instead of water) and see if they produce different results.

Please take photos if you can - I would love to see you all experimenting!
